## OBJECTIVE

Results-driven Data Science professional (B.S. Data Science, GPA 3.4, Dean's List) seeking roles as a **Business Analyst**, **AI/ML Engineer**, or **Data Scientist** where I can apply production experience in LLM agent systems, data engineering, business intelligence, and analytical problem-solving to deliver measurable business impact. Proven ability to translate complex business requirements into technical solutions, build end-to-end AI and data pipelines, develop dashboards and reporting frameworks, and communicate data-driven insights to executive and cross-functional stakeholders. Available to relocate anywhere in the US immediately.

## EDUCATION

**University of Toledo** — B.S. Data Science | Minor: Computer Science | GPA: 3.4/4.0 | Dean's List | Aug 2022 – Apr 2026

*Relevant Coursework: Machine Learning & Deep Learning, LLM Agent Systems & GenAI, Data Engineering & ETL Pipelines, Business Analysis & Requirements Engineering, Statistical Analysis (R, SAS, Python), Cloud Platforms (AWS/Azure/GCP), Database Systems (SQL, PostgreSQL, MongoDB), BI & Visualization (Power BI, Tableau), Financial Analytics, GIS (ArcGIS Pro, ArcMap), Software Engineering, SDLC & Agile Delivery*

## TECHNICAL SKILLS

**AI/ML & GenAI:** LangChain, LangGraph, AutoGen, CrewAI, Semantic Kernel, LlamaIndex, MCP Servers, Claude Code, RAG Pipelines, FAISS, Pinecone, Prompt Engineering, PyTorch, Scikit-learn, HuggingFace, OpenAI/Claude/Gemini APIs, n8n, Agentic AI Frameworks, NLP, Text Mining

**Data Engineering:** ETL/ELT Pipeline Development, Apache Airflow, Apache Spark/PySpark, dbt, Snowflake, Databricks (Delta Lake), Azure Data Factory, Google BigQuery, AWS Redshift, Kafka, Data Quality & Monitoring, OpenTelemetry, Prometheus/Grafana, Multi-Source Data Integration

**Business Analysis & BI:** Requirements Elicitation & Documentation, User Stories & Acceptance Criteria, Business Process Analysis, SDLC, UAT & System Testing, Power BI (DAX, Power Query), Tableau, Advanced Excel (Pivot Tables, Financial Modeling), Stakeholder Communication, Agile Delivery, Jira, Visio, Microsoft Project

**Programming & Tools:** Python (Pandas, NumPy, Scikit-learn, FastAPI, SQLAlchemy), SQL (Advanced), R, Java, JavaScript, C++, Go, SAS, MATLAB, Git/GitHub, CI/CD (GitHub Actions, Azure DevOps), Docker, Kubernetes, Terraform, Microsoft Office 365

**Cloud & Domain:** AWS (S3, EC2, EKS, SageMaker), Azure (Data Factory, AI Studio, AKS, Key Vault), GCP (BigQuery, Vertex AI, GCS), HL7/FHIR, EHR/EMR (Epic), HIPAA, PeopleSoft, SAP, Salesforce, Workday, Oracle JD Edwards, ServiceNow, ArcGIS Pro/ArcMap/QGIS, VLANs/Firewalls/VPN

## EXPERIENCE

**Aurat Aroma LLC — Louisville, KY**

*AI/ML Engineer – GenAI & Digital Transformation | June 2025 – December 2025*

- Designed and built production generative AI agents and platforms using LangChain, LangGraph, AutoGen, CrewAI, and MCP servers integrating cloud LLMs (OpenAI, Claude, Gemini) with RAG pipelines, FAISS/Pinecone vector databases, and n8n workflow orchestration for enterprise automation.
- Built and maintained ETL/ELT data pipelines in Python, PySpark, and SQL on AWS/Azure/GCP processing 50K+ records from multiple structured and unstructured sources with robust QA, encryption, OpenTelemetry monitoring, and CI/CD deployment via GitHub Actions.
- Translated complex business requirements into technical AI and data solutions, collaborating cross-functionally with engineering, product, analytics, and business leadership teams — communicating findings clearly to both technical and non-technical stakeholders.
- Applied advanced prompt engineering (zero-shot, few-shot, chain-of-thought, ReAct) and built reusable AI assets including prompt libraries and automation checklists — delivering approximately 20% operational efficiency improvement across enterprise client engagements.
- Developed and maintained Power BI and Tableau dashboards with KPI tracking and automated reporting frameworks, enabling data-driven decision-making for marketing, operational, and business intelligence functions across the organization.
- Performed data mining, statistical analysis, and quantitative modeling on large datasets using Python (Pandas, NumPy, Scikit-learn), R, and SQL — synthesizing complex analyses into clear, actionable insights and executive-facing presentations for stakeholder consumption.
- Elicited, analyzed, and documented business and functional requirements, translating ambiguous needs into shippable scope with PRD-light specs, success metrics, acceptance criteria, and technical documentation enabling development teams to execute without ongoing involvement.
- Deployed production AI services end-to-end using Docker, Kubernetes, Terraform, and Azure/GCP/AWS with Prometheus/Grafana observability, maintaining comprehensive technical documentation of process designs, test results, and pipeline configurations throughout.

**University of Toledo — Toledo, OH**

*Desktop Engineer | August 2024 – April 2026*

- Managed and supported 200+ enterprise endpoints across the university health system including EHR/EMR (Epic), PACS/AGFA enterprise imaging, PeopleSoft financials, and HL7/FHIR healthcare interoperability interfaces in hospital and clinical environments.
- Automated IT workflows and operational processes using Python and PowerShell scripting, reducing ticket resolution time by 40% across 15+ processes — applying data engineering principles to build ETL pipelines and SQL-based reporting for 100+ monthly operational datasets.
- Built and maintained Power BI and Tableau dashboards tracking operational KPIs for IT leadership, eliciting stakeholder requirements, translating business needs into analytical solutions, and communicating findings clearly to both technical and non-technical audiences.
- Analyzed business and operational data using Python, R, SAS, and SQL — performing root cause analysis, identifying trends and anomalies, and developing data-driven recommendations that drove measurable process improvements across enterprise IT operations.
- Configured enterprise networking including VLANs, subnets, firewalls, and VPN with HIPAA-aligned data security standards — collaborating with hospital IT and integration teams to ensure reliable, secure data flow between clinical systems across the health science campus.
- Supported healthcare interoperability by working with HL7 and FHIR data exchange standards, EHR/EMR platform integration, and interface engine environments — maintaining working knowledge of clinical system connectivity and healthcare workflow integration requirements.
- Developed and maintained process documentation, SOPs, and knowledge-base articles for all operational workflows — creating training materials, delivering user training to university stakeholders, and supporting system testing and UAT with prepared test scenarios.
- Collaborated with cross-functional teams including clinical staff, IT administrators, and university leadership — demonstrating strong analytical, interpersonal, and communication skills with high attention to detail, organizational rigor, and deadline adherence.

## PROJECTS

- Synthetic Olfactory Engine — Production Multi-Agent AI Platform:** Built production multi-agent AI system using LangChain, LangGraph, AutoGen, CrewAI, and MCP servers integrating cloud LLMs with RAG pipelines (FAISS, Pinecone), knowledge graphs, and n8n workflow orchestration for autonomous enterprise task execution.
- GenAI Workflow Automation:** Built AI-driven automation using Python, ChatGPT API, and advanced prompt engineering for data processing, reporting, and workflow efficiency with reusable prompt libraries and AI asset management delivering measurable productivity improvements.
- Salary Prediction ML Model:** Developed production ML models (Linear, KNN, Ridge, Lasso) in Python/Scikit-learn with feature engineering and evaluation ( $R^2$ , RMSE) predicting salary trends from large structured datasets — directly applicable to business forecasting and analytics.
- Bitcoin Price Analysis — Large-Scale Financial Analytics:** Analyzed 100K+ financial transactions using SAS, Excel, and regression modeling ( $R^2=0.75$ ) to identify key statistical drivers of price trends, delivering executive Power BI dashboard insights for data-driven decision-making.
- NBA Analytics AI Agent:** LLM-powered analytics agent using LangChain tools, nba\_api, Python (Pandas, Matplotlib), and prompt engineering enabling natural language querying of statistical data and delivering intelligent performance insights.
